Summary of the 2025 Double Materiality Review

December 2025

Project Objective

Following the publication of the EFRAG Implementation Guidance on Materiality Assessment in mid-2024, and Aqualia's completion of its Climate- and Nature-Related Risk Reports (TNFD), the company proceeded to update its 2024 Double Materiality Assessment. The goal was to incorporate this new information and align the terminology with the CSRD. To achieve this, the following phases were carried out:

1. Contextual Analysis
2. Inclusion of CSRD-related nuances, reformulation of IROs, and Value Chain mapping
3. Internal validation of Risks and final determination of Material Topics

Review of the Double Materiality Assessment for CSRD Alignment

Project Phases

	Phase 1 Contextual Analysis	Phase 2 Inclusion of CSRD Nuances, Reformulation of IROs, and Value Chain Mapping	Phase 3 Internal Validation of Risks and Final Determination of Material Topics
Objetive	Evaluation of the internal context and strategy (diagnostic) and external analysis to identify relevant variations and trends.Performance of a benchmark on material topics of companies in the water sector and other relevant sources. **Deliverables:** • **Contextual analysis and sectoral benchmark** • **Preliminary list of topics and DPs, GRI and SASB mapping for Workiva indicator request**	Mapping of the value chain and review of IROs Inclusion of ESG risks in Aqualia's proposed risk map Meeting with the Sustainability department to refine the preliminary list of IROs and define profiles for Phase 3 (risk map validation with relevant areas) **Deliverables / Sessions:** • **Validation of the IRO list with the Sustainability department** • **Validation session on Material Topics and Risks & Opportunities consistent with the risk map with the Strategic Development and Sustainability department** • **Description of the Value Chain and mapping of IROs, including updated Stakeholder Groups**	Validation with area managers to assess severity and likelihood of identified risks in relation to material topics, following CSRD evaluation criteria Preparation of the approach and deliverable for validation of the preliminary list of topics/IROs by the Executive Committee **Deliverables / Sessions:** • **Updated list of Risks and Opportunities validated with the Strategic Development and Sustainability department** • **Risk assessment Excel for the Executive Committee, including geographic areas and countries** • **Global and country-level risk assessment*** • **Final list of material topics and linkage to reporting** • **Final report of the Double Materiality Review**

*Due to scheduling constraints, the assessment from the countries could not be carried out.

Review of the Double Materiality

Phase 1: Framework, Sources, and Competitors Analyzed

Phase 1
Contextual Analysis

Assessment of the internal context and strategy (diagnostic) and of the external context to identify relevant variations and trends.

Execution of a benchmark on material topics of companies in the water sector and other relevant sources.

Deliverable:

Contextual analysis and sectoral benchmark

1.1. Analysis of information from secondary sources, including recent sector reports, national and European regulatory frameworks, and ESG standards and ratings:

- European Water Resilience Strategy
- EC Water Security for People, Economy and Environment
- How to Adapt to Extreme Climate Change Impacts: Floods and Droughts – WWF
- Cada Gota Cuenta – Fluidra / IEA
- MSCI / Sustainalytics / S&P
- SASB Water Utilities & Services Standard

1.2. Analysis of material topics for competitors identified by Aqualia and group-level peers:

- Veolia Agua
- Saur
- Facsa
- Global Omnium

1.3. Analysis of internal sources and previous work by 21gramos for Aqualia

- Diagnostic Analysis – April 2025
- Aqualia Gap Analysis – May 2025 (based on preliminary material topics)
- Proposed ESG Risk Map – June 2025

The year 2025 has been marked by a new perspective on corporate sustainability in Europe, emerging at the end of the previous year following the publication of the Draghi Report in September.This report was conceived as a thorough and unrestrained analysis of why the European Union was losing economic and technological ground to the U.S. and China.

In December 2024, the new European Commission for the 2024–2029 term adopted the Draghi Report as the foundation of its core economic strategy, formalized in the **"Competitiveness Compass".** This shift coincided with the beginning of the new Trump administration on the other side of the Atlantic and its drastic deregulation agenda in ESG matters, including the withdrawal of incentives.

European Competitiveness Compass (29/01/2025)

- Strengthen its competitiveness, including measures to reduce the regulatory burden related to sustainability (the Omnibus Simplification Package I, which addresses sustainability reporting (CSRD), Taxonomy, and Due Diligence (CSDDD)).
- Promote innovation and "clean technologies and products", to avoid falling behind China (the Clean Industrial Deal was released in February).
- Ensure economic security, investing in clean energy to avoid reliance on fossil fuels and reaffirming that the path toward climate neutrality remains intact.

In this same direction, in June 2025, through the European Water Resilience Strategy, the European Commission issued a clear mandate:

Address water scarcity and boost innovation and competitiveness in the water industry, adopting a clean and circular approach

Since 2020, several relevant regulations preceding the European Water Resilience Strategy have paved the way:

- **2021: Glasgow Declaration for Fair Water Footprints (International**) – promotes corporate commitments to achieving fair and sustainable water-use practices across supply chains.
- **2022: CSRD Directive and ESRS E3 (European Union)** – the specific standard requiring large companies to report on impacts, dependencies, and risks related to water.
- **2024: Directive 2024/3019 on Urban Wastewater Treatment (European Union)** – modernizes wastewater treatment with three key priorities: energy efficiency, emerging pollutants, and circular economy. It drives investment in advanced treatment technologies.
- **2024: Royal Decree 1985/2024 (Spain)** – establishes the national framework to promote the reuse of wastewater (both urban and industrial).
- **2024: Nature Credits Roadmap (European Commission)** – outlines the future architecture for voluntary nature credit markets, including water and biodiversity credits.

2025: EU Water Resilience Strategy (European Union) A high-level strategy adopted in June, focused on water security in the face of scarcity and pollution. It sets out an integrated, circular and digital agenda for Europe.

2025–2028: "Water Efficiency First" Plans (European Union) These plans promote water reuse in agriculture and industry, leakage reduction, and strict consumption controls in water-intensive sectors (e.g., data centers). They emphasize operational efficiency as the guiding principle.

European Water Resilience Strategy (04/06/2025)

Five EU Action Areas:

Governance and Implementation
Financing, Investments and Infrastructure
Digitalization
Research & Innovation, Industry and Skills
Security and Preparedness

European Commission Recommendation

"Water efficiency first" as the central pillar:
Reduce demand (target of 10% improvement by 2030)
Transparent governance
Investment in talent
Digitalization
Cross-border and international cooperation

Water management has become **a global Risk and Resilience imperative** for companies and nations.

Global risks ranked by severity

WORLD ECONOMIC FORUM

Please estimate the likely impact (severity) of the following risks over a 2-year and 10-year period.

	Short term (2 years)	Long term (10 years)
1st	Geoeconomic confrontation	Extreme weather events
2nd	Misinformation and disinformation	Biodiversity loss and ecosystem collapse
3rd	Societal polarization	Critical change to Earth systems
4th	Extreme weather events	Misinformation and disinformation
5th	State-based armed conflict	Adverse outcomes of AI technologies
6th	Cyber insecurity	Natural resource shortages
7th	Inequality	Inequality
8th	Erosion of human rights and/or of civic freedoms	Cyber insecurity
9th	Pollution	Societal polarization
10th	Involuntary migration or displacement	Pollution

Risk categories: Environmental, Geopolitical, Societal, Technological

Source: World Economic Forum Global Risks Perception Survey 2025-2026.

Water scarcity is a priority global risk:

Five of the top ten long-term global risks for companies are related to water, highlighting its direct impact on supply security and economic competitiveness.

Global water demand is projected to exceed available supply by 40% by 2030, further intensifying scarcity. In addition, water-related disasters in 2024 already caused major displacement and significant economic losses.

The latest IPCC report identifies **increased heatwaves, severe droughts, flash floods, and rising sea levels** as the main risks for Europe, further exacerbating biodiversity loss —which could increase up to tenfold in a scenario of 3°C global warming.

Water as a Strategic Foundation: Water resilience is defined as the capacity of a system to anticipate, reduce, adapt to, and recover from disruptions. Strengthening it is essential for global economic stability (preventing high single-digit GDP losses by 2050) and national security, due to its link with energy.

Need for Local Investment and Innovation: Innovative local solutions are crucial, supported by data-driven approaches and governance frameworks that enable the development of circular, net-zero water systems.

At the Ecosystem Level: A new approach to water use and ecosystem protection is emerging—one that values the entire hydrological cycle through holistic strategies supported by innovation and collaborative models.

S&P Global

Multi & Water Utilities Sector

Assessment dimensions:

- **Environmental (44%):** climate strategy, water management, emissions control and biodiversity
- **Social (29%):** occupational health and safety, stakeholder engagement and social licence
- **Governance (27%):** business ethics, risk management and market-opportunity oversight

Identified levers of change: ageing networks and resistance to privatisation in developed markets, increasing water stress in emerging markets, regulatory pressure and the need for affordable tariffs. The shift towards tangible implementation of climate targets and OT/IT cybersecurity are emerging as critical criteria.

SASB

Water Utilities & Services Sector

Strategic pillars:

- Energy management and network efficiency
- Effluent and drinking-water quality
- Accessibility and supply resilience
- Climate-change impacts

Key metrics: NRW (non-revenue water), pipe replacement rate, incidents of effluent non-compliance, total energy consumption and share of renewable energy.

Regulatory connection: while SASB is not mandatory in the EU, it serves as a technical basis for CSRD and facilitates alignment with global frameworks (ISSB) and ESG assessments by international agencies.

MSCI

Water Utilities Sector

Strategic pillars:

- **Environmental (45%):** Water Stress (24.6%), Biodiversity (9.8%), Carbon Emissions (9.8%)
- **Social (20%):** product safety and quality
- **Governance (35%):** anti-corruption, transparency in procurement, crisis management and cybersecurity

Key trends: strengthened corporate governance, greater weight for biodiversity (alignment with TNFD), cybersecurity as an emerging material risk, and an energy transition integrated with water resilience.

Sustainalytics

Utilities Sector

Strategic pillars:

- Water use and water-resource management
- Emissions, effluents and waste
- Product governance (service quality and safety)
- Business ethics (anti-corruption, fair practices)
- Privacy and cybersecurity (growing risk)
- Community relations and biodiversity

Methodological improvements 2024–2025: separation of governance into Corporate and Stakeholder Governance, a new dedicated "Water" pillar with greater weight, expanded cybersecurity scope, and a dual controversy-scoring system (financial risk + reputational impact).

Benchmark Analysis – List

1. Climate Change
2. Pollution / Depollution (e.g., Veolia)
3. Water and Marine Resources –
"Water Resource Sustainability" (e.g., Veolia)
"Supporting industrial clients in the sustainable use of water resources (ES)"
"Developing activities to reduce freshwater extraction (ES)"
"Gap between customer expectations on responsible potable water use and current remuneration models based on volume (ES)"
4. Biodiversity and Ecosystems –
"Preservation and Management"
Example (Facsa): "Monitoring and maintaining landscapes and habitats"
5. Circular Economy
(not only water-related; also waste recovery/valorisation)
6. Own WorkforceEmployee health and safety
Training and talent retention / Work–life balance
Equality and diversity
7. Workers in the Value Chain
Human and labour rights
8. Affected Communities
"Local development in the territories"
Example (Veolia): "Educational role with stakeholders to explain ecological transformation (ES)"
Example (Aqualia): "Social Action"; "Infrastructure"
9. Consumers and End Users
Privacy (GDPR)
Health and safety
Access to information / service relationship and service safety
10. Business Conduct
Corporate culture / Transparency
Anti-corruption and bribery
Supplier relationship management, including payment practices
Whistleblower protection
Cybersecurity

Risk List Conclusion

To Aqualia's existing High Risks, additional risks were incorporated due to recurrence among competitors and insights from the contextual analysis *(in italics).*

Strategic
Inadequate management of reputational image (H)
Negative changes in regulation or socio-economic/political conditions of a country (H)
Veolia: Risks linked to regulatory changes in health or environmental matters (biodiversity restoration / innovation)
Geopolitical and economic tensions

Compliance
Non-compliance with Health and Safety standards (M)
Non-compliance with contractual obligations with public administrations or private entities (M)
Non-compliance with water-related regulation or other legal requirements in a country (M)

Financial
Interest rate fluctuations (H)
Veolia: Risks associated with meteorological effects

Operational
Deficiencies in the quality and/or flow of water supplied to the population (M)
Inadequate customer management (M) / *GDPR*
Loss of key employees (H)
Risks related to employee health and safety
Deficiencies in the quality of wastewater discharge and atmospheric emissions (H)
Loss of technical capacity to compete in the water management market (L)
Insufficient capacity to meet digitalization needs (H)
Inadequate capacity to respond to cyberattacks (H)

Review of the Double Materiality

Phase 1: Framework, Sources and Competitors Analyzed — Preliminary List of Material Topics

Through the analyses carried out in Phase 1 across its three sub-phases, we arrived at the list of preliminary material topics that will guide the identification of IROs:

1.1 Analysis of information from secondary sources, including recent sector reports, national and European regulatory frameworks, and ESG standards and ratings:

a. European Water Resilience Strategy
b. EC Water Security for People, Economy and Environment
c. How to Adapt to Extreme Climate Change Impacts: Floods and Droughts – WWF
d. Cada Gota Cuenta – Fluidra / IEA
e. MSCI / Sustainalytics / S&P
f. SASB Water Utilities and Services Standard

1.2 In reference to the material matters listed in paragraph AR 16 of ESRS 1 under the European CSRD, we analyzed the **material topics of Aqualia's competitors:**

Veolia Agua ; Suez ; Saur ; Facsa ; Global Omnium

a. We identified both sector-specific and company-specific issues.

1.3 Analysis of internal sources (Material Topics and IROs, Diagnostic Analysis April 2025, Gap Analysis Aqualia May 2025, and Aqualia Risk Map)

12 Key ESG Themes for the Water Sector

Environmental Dimension (4)
Climate Change (Carbon Emissions / Energy)
Water Efficiency / Water Use
Circularity
Biodiversity and Land Use
Social Dimension (4)
Product Safety and Quality(Supply and Network Resilience)
Employee Health and Safety
Attraction, Retention and Skills
DevelopmentGovernance (3)
Business Ethics
Value Chain Workforce (Human Rights)
Data Privacy and Cybersecurity
Sector-Specific (1)
Financing, Investments and Infrastructure

Review of the Double Materiality

Phase 2: Inclusion of CSRD Nuances, Reformulation of IROs and Value Chain Mapping

Identification of ESRS-Aligned IROs: Impacts

Based on the list of material topics resulting from the contextual analysis carried out according to the EFRAG-proposed framework and aligned with the ESRS, we proceeded as follows:

Impact Identification: This analysis was conducted through desk research, reviewing macro and sector trends, analyzing competitors, re-evaluating impacts from the previous assessment, and reviewing new Aqualia documentation (climate risks, TNFD, among others).

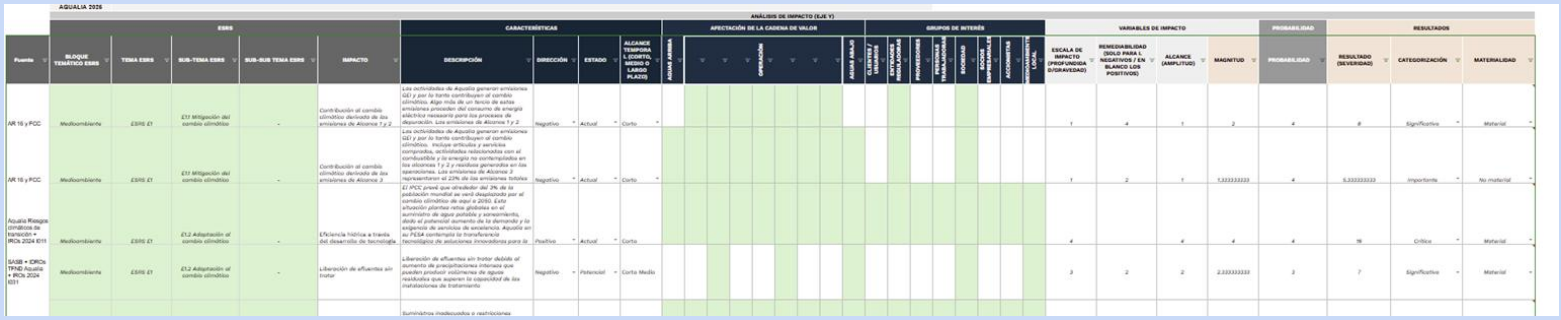
Impacts on different stakeholder groups can be positive or negative, and current or potential.

Potential Impacts: These are assessed based on scale, scope and remediability, and are also evaluated according to their probability.

Current Impacts: These are those already occurring in the present. In this case, they are evaluated only in terms of scale, scope and remediability (i.e., probability is assigned the maximum value).

- An assessment of scale, scope, remediability and probability is carried out through consultation with internal and/or external stakeholders*.
- For each impact, a qualitative evaluation of the above factors is performed based on the knowledge and experience of the participants regarding Aqualia's operations.
- The severity score is calculated as the average of the evaluations of scale, scope and remediability.

Factor		What is assessed?	Possible impacts
Severity	Scale	How serious the impact is (how deep it is)	Current and potential; positive and negative
	Scope	Current and potential; positive and negative	Current and potential; positive and negative
	Remediability	The extent to which the impact can be remedied	Current and potential; negative
Probability		Probability of occurrence	Potential only; positive and negative



*** In our 2025 exercise for reviewing and redefining IROs, this part was carried out internally within the Sustainability Department. As a result of this analysis, 16 negative impacts and 15 positive impacts were identified as material.**

Review of the Double Materiality

Phase 2: Inclusion of CSRD Nuances, Reformulation of IROs and Value Chain Mapping

Identification of ESRS-Aligned IROs: Risks & Opportunities

Based on the list of material topics resulting from the contextual analysis carried out according to the EFRAG-proposed list and in alignment with the ESRS, we proceeded as follows:

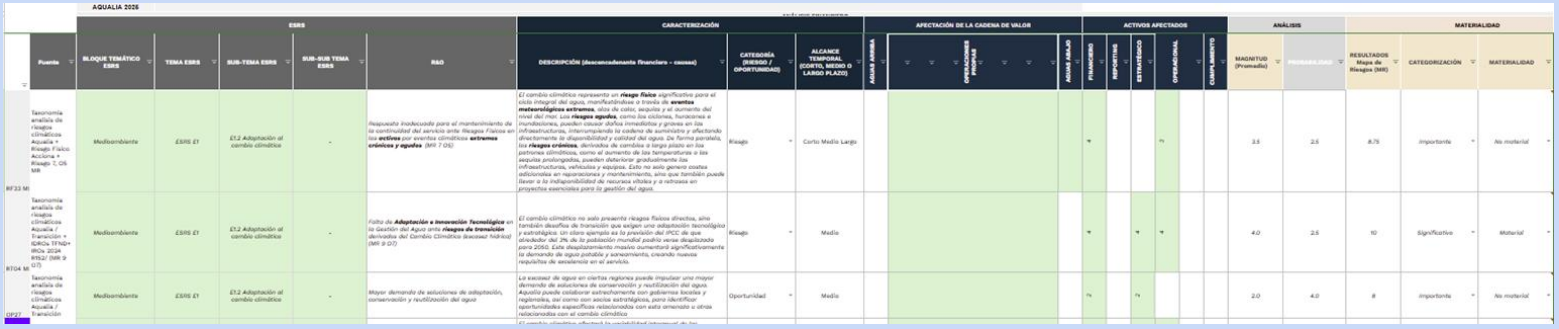
Identification of Risks & Opportunities (R&O) This inward-looking perspective assesses how the positive and negative impacts previously identified may translate into Risks and Opportunities, as well as how Aqualia's dependencies may influence its financial performance. In identifying these R&O, we considered:the impact analysis and its translation into Risks and Opportunities, new documentation on environmental and biodiversity-related risks (climate risks, TNFD), Aqualia's current risk map, and risks identified in the previous assessment (2024).

A first proposal was prepared for subsequent evaluation by Aqualia using the financial materiality assessment sheet (example shown below).

Risks and opportunities are evaluated based on: their probability of occurrence, and the potential magnitude of their financial effects in the short, medium and long term. To calculate the Severity of each Risk or Opportunity: the magnitude was assessed for each affected asset using magnitude tables (Excel VF_DMA_Proceso&Analisis), he average magnitude was multiplied by the probability: Severity = Average Magnitude × Probability

Assessment:
Score resulting from the multiplication of:

Factor	What is assessed?
Magnitude	Magnitude of the financial effect of the risk/opportunity
Probability	Probability of occurrence



AQUALIA 2026																												
		ESRS					CARACTERIZACIÓN			AFECTACIÓN DE LA CADENA DE VALOR						ACTIVOS AFECTADOS						ANÁLISIS		MATERIALIDAD		
	Puente	BLOQUE TEMÁTICO ESRS	TEMA ESRS	SUB-TEMA ESRS	SUB-SUB TEMA ESRS	R&O	DESCRIPCIÓN (desencadenante financiero - causa)	CATEGORÍA (RIESGO / OPORTUNIDAD)	ALCANCE TEMPORAL (CORTO, MEDIO O LARGO PLAZO)	AGUA PONDA		OPERACIONES PROPIAS			AGUA ABAJO	FINANCIERO	REPUTACIÓN	ESTRATÉGICO	OPERACIONAL	CUMPLIMIENTO	MAGNITUD (Promedio)	PROBABILIDAD	RESULTADOS Mapa de Riesgos (MR)	CATEGORIZACIÓN	MATERIALIDAD
RF33 MI	Taxonomía analítica de riesgos climáticos Aqualia + Riesgo Físico Acciona + Riesgo T, OS MR	Medioambiente	ESRS E1	E1.2 Adaptación al cambio climático	-	Respuesta inadecuada para el mantenimiento de la continuidad del servicio ante Riesgos Físicos en los **activos** por eventos climáticos **extremos crónicos y agudos** (MR 7 OS)	El cambio climático representa un ***riesgo físico*** significativo para el ciclo integral del agua, manifestándose a través de **eventos meteorológicos extremos**, olas de calor, sequías y el aumento del nivel del mar. Los **riesgos agudos**, como los ciclones, huracanes e inundaciones, pueden causar daños inmediatos y graves en las infraestructuras, interrumpiendo la cadena de suministro y afectando directamente la disponibilidad y calidad del agua. De forma paralela, los **riesgos crónicos**, derivados de cambios a largo plazo en los patrones climáticos, como el aumento de las temperaturas o las sequías prolongadas, pueden deteriorar gradualmente las infraestructuras, vehículos y equipos. Esto no solo genera costes adicionales en reparaciones y mantenimiento, sino que también puede llevar a la indisponibilidad de recursos vitales y a retrasos en proyectos esenciales para la gestión del agua.	Riesgo	Corto Medio Largo													3.5	2.5	8.75	Importante	No material
RT04 MI	Taxonomía analítica de riesgos climáticos Aqualia / Transición + (GRC04 TFND+ IROs 2024 RTS2/ (MR 9 OT)	Medioambiente	ESRS E1	E1.2 Adaptación al cambio climático	-	Falta de **Adaptación e Innovación Tecnológica** en la Gestión del Agua ante **riesgos de transición** derivados del Cambio Climático (escasez hídrica) (MR 9 OT)	El cambio climático no solo presenta riesgos físicos directos, sino también desafíos de transición que exigen una adaptación tecnológica y estratégica. Un claro ejemplo es la previsión del IPCC de que alrededor del 3% de la población mundial podría verse desplazada para 2050. Este desplazamiento masivo aumentará significativamente la demanda de agua potable y saneamiento, creando nuevas requisitos de escalenia en el servicio.	Riesgo	Medio													4.0	2.5	10	Significativo	Material
OP27	Taxonomía analítica de riesgos climáticos Aqualia / Transición	Medioambiente	ESRS E1	E1.2 Adaptación al cambio climático	-	Mayor demanda de soluciones de adaptación, conservación y reutilización del agua	La escasez de agua en ciertas regiones puede impulsar una mayor demanda de soluciones de conservación y reutilización del agua. Aqualia puede colaborar estrechamente con gobiernos locales y reguladores, así como con socios estratégicos, para identificar oportunidades específicas relacionadas con esta amenaza u otras relacionadas con el cambio climático	Oportunidad	Medio													2.0	4.0	8	Importante	No material

For the evaluation of Risks and Opportunities, the following steps were considered: 1. Validation by the Sustainability Department, 2.Validation by the Strategic Development & Sustainability Department and the Management System, 3. Assessment by the Executive Committee. As a result of this analysis, 24 Risks and 11 Opportunities were identified as material.

Taking into account the analyses carried out in Phases 1 and 2 and following the internal validation steps with: the Sustainability Department, the Strategic Development & Sustainability Department and the Management System, and the evaluation by the Executive Committee, e arrive at the new 16 material topics, which are presented on the next page. It is worth highlighting that **six new topics have been identified**, aligned with the five EU Action Areas and recommendations of the European Water Resilience Strategy:

i. Commitment to **talent development**

ii. Commitment to **labour rights and Human Rights in the supply chain**

iii. Technological and infrastructure **innovation**

iv. Financing management and **green finance**

v. Commitment to **cybersecurity** and response capacity

vi. Digitalisation

On the next page, the six new topics appear in **blue bold** (6). The topics shown in **ochre** are former ones that have been absorbed into the new topics (3). Two additional topics have been reformulated together with new ones. Items marked with AQ indicate topics that are specific to Aqualia or to its sector.

Review of the Double Materiality

Phase 3: Material Topics 2025

Material Topics 2025 (16)		Material Topics 2024 (15)
Water Efficiency, Commitment to Climate Change Mitigation and Adaptation, and Biodiversity Regeneration		**Environment**
E1	Mitigation and Adaptation to Climate Change	Climate Change Management
E3	Water Resource Sustainability	Access to Water and Sanitation in the Communities Where Aqualia Operates
E4	Impact Management and Biodiversity Preservation	Biodiversity and Land Use
E5	Circular Economy: Optimising Resource Use and By-product Recovery	Pollution, Biodiversity (Ecosystem Management) and Natural Resources
Innovation for Planetary Care		
	Technological and Infrastructure Innovation (AQ)	
	Digitalisation (AQ)	
Environment for Development, Safety and Diversity for Our Talent		**Social**
S1	**Commitment to the Development of Our Talent**	
S1	Employee Health and Safety	Safety, Health and Wellbeing (Physical, Mental and Social)
S1	Diverse, Inclusive and Equitable Culture	Diversity, Equity and Inclusion
Customer Satisfaction and Safety		Stakeholder Engagement
S4	Customer Safety and Service Quality	Customer and User Safety and Service Delivery
S4	Resilient and Secure Service Delivery	Processes, Procedures and Digitalisation
Business Conduct at Aqualia and Across the Value Chain		**Governance**
G1	Compliance Culture: Legal, Regulatory and Social	Transparency and Accountability
G1	**Commitment to Labour Rights and Human Rights in the Supply Chain**	Supplier Assessment, Evaluation and Approval
G1	Supplier Relationship Management	Ethics and Anti-Corruption
	Financing Management and Green Finance (AQ)	Management of Climate, Economic and Financial Objectives
S4	**Commitment to Cybersecurity: Prevention and Effective Response**	Social Actions: Donations, Sponsorships of Cultural, Sports or Community Support Activities

Review of the Double Materiality

2025: Material Topics, Impacts, and Material Risks & Opportunities in the PESA
